## 3S ERP

3S ERP is specifically designed for small to medium-sized manufacturing companies. The ERP is a fully-integrated system with a wide range of management modules that cater for production, manufacturing, and administration.

The 3S ERP production module is particularly well-equipped for manufacturers, offering features for quality management, hazardous materials handling, tool management and product planning and configuration. It also interfaces with CAD. As 3S ERP is modular, users can build up from basic financial management with production, distribution, CRM and much more. 3S ERP is easily customized and does not need any additional programming knowledge.

The security of 3S ERP data is managed at three levels – the operating system, the network and at the level to the database and applications. Access can be limited to the user level, meaning you can control access to restricted data across user groups. 3S ERP offers searchable one-time data entry, with advanced analytics features alongside this. It also helps support internal and external financial audits.

3S ERP is installed on-premise, with iOS and web apps available for increased mobility. System installation takes around seven days, and 3S offer user training during implementation. Users can access software updates and upgrades free of charge.

## ACCELERATED ERP

Metasystems software was first introduced to manufacturers in the early 1980's and is written in Oracle Forms and Reports. Currently there are two licensing models available: ICIM and Accelerated ERP. ICIM and Accelerated ERP are designed for small to mid-sized discrete manufacturers in the MTO, ETO, CTO, ATO or mixed mode manufacturing industries. Metasystems staff are the authors, programmers, implementers and support team for the software giving customers the ability to work direct with the designers of the software.

ICIM and Accelerated ERP is a completely integrated business system with a quote - to production - to cash - to warranty management business flow. Functionality includes multi-company, multi-location capabilities, quote/sales order maintenance, product configuration, rules or bill based multi-level BOM's, purchasing/receiving, inventory control, work order control and tracking, production scheduling, shop floor control, S/N, Vin and Lot Control, ECR/ECN with date effectivity, time and attendance, shipping, invoicing, full financials including A/R, A/P, G/L, cost accounting, warranty management including repair and overhaul, warranty registration, rentals and more.

## ACCESS ERP

Access ERP is an end-to-end ERP designed to manage and monitor manufacturing and distribution operations. The system is currently being used in a wide range of industries, including aerospace and defense, engineering, construction, food and drink, and fashion.

By offering a single platform which brings together financial monitoring and reporting with purchasing and stock management, Access ERP aims to minimize time spent on administrative tasks through automated processes which can be programmed to adapt based on monthly data forecasts.

Access ERP can manage the entire manufacturing process from estimations and quotations, through to work orders and production scheduling. The aim of the Access ERP system is to give visibility to all areas of operation and enhance the productivity of the workforce through automation of daily tasks. The manufacturing and distribution ERP can be expanded by integrating other Access Group products such as financials, CRM and purchasing systems.

Access ERP is a web-based system and so can be accessed via any desktop and on mobile devices. The ERP can be hosted via the cloud or installed at the user's premises.

## ADAGIO ACCOUNTING

Adagio Accounting ERP is designed for small to medium organizations that manage between \$2 to \$100 million in sales and revenue, with high levels of transaction volume and usually a standalone IT department.

Adagio Accounting ERP is a modular accounting system that combines a batch interface with online processing in order entry and inventory control. Invoices, checks and statements are fully customizable. It is able to fully integrate with the whole Microsoft and Oracle databases, as well as Dakota and Qlab, and is available in multi-language and multi-currency.

Adagio Accounting ERP has many modules that provide accounting functionality, including bank reconciliation, invoicing, purchase orders, ledger, and job costing and reporting. It also has many functions that integrate the business, such as ePrint applications, inventory tools, sales analysis and timekeeping.

## ADAM

ABS's ERP software, Advanced Distribution and Management (ADaM), is a modular Windows-based suite designed to enable growth through customer service, inventory and critical asset management applications: ABS' ADaM system aims to be easy to use – featuring flexible look-ups and pop-up inquiries in the form of Event Notifications – yet sufficiently powerful for effective business management.

ADaM consists of 10 core modules: Accounts Payable, Accounts Receivable, Customer Processing (CRM; 'ship to' accounts; tax coding and control), Contact Management, General Ledger, Inventory Management (BoM; demand forecast; EOQ), Sales Order Processing (quotations; PoS; credit management), Purchasing and Receiving (purchase order expediting; shipment tracking), Vendor Processing (1099 coding; A/P invoicing) Sales Analysis and ADaM Report Builder (output to formats including RTF, PDF, XLS and HTML).

Specific versions of ADaM include Aviation Distribution and Management and Tire Order Management; the latter designed for commercial tire dealers and featuring Tire Order Processing, Quick Display and Quoting, Supplier Interface and Integration, Retread System Interface, Retread Plant Management and Dispatch Control Center modules.

ABS also states that ADaM can be customised via seven optional add-on applications: ADaM On-Line (e-commerce functionality including customer accounts, dynamic data access and shopping carts), ADaM ReCON (mobile access via tablet and smartphone), Asset Management, Wireless Warehouse Management (real-time via barcoding and RF devices), ADaM Mobile Sync (server deployment), ADaM E-Sign (legally binding signature capture) and Executive Visual Environment (data-visualized EIS).

## ADJUTANT ERP

Adjutant ERP, from ABIS, is tailored for the manufacturing sector, designed to handle a producer's entire workflow from production planning, inventory control and scheduling through to cost estimates and asset tracking.

Accounting is integrated within Adjutant ERP with the ability for business users to generate customized reports on any employee within an organization. A variety of customizable components covers the entire system from a single interface and users are able to generate reports on any aspect of daily operations.

The solution can automate an entire manufacturing process from labor and materials planning to shipment tracking. Within the organization component, the ERP gives a business control over the relationship between materials needed and the product being created including allowing for substitution of materials.

A server-based ERP, Adjutant is installed onsite. The manufacturing ERP is accessible on desktops and mobile devices.

## AFS ERP

AFS ERP is aimed at small and medium-sized enterprises up to 1000 employees. It can be both delivered on-premise or deployed through the cloud and is a multi-language, multi-currency platform, which is fully customizable. AFS ERP is aimed at consulting and business services, the food service sector, manufacturing and engineering and retail.

The platform offers an extensive set of tools and resources including billing, costing, financials and accounting, IT, BI and quality control. AFS ERP is an end-to-end solution that optimizes the flow of information throughout an organization across the entire process. Processes, such as food-service contracts, are automated and provides real-time information.

AFS ERP is scalable, meaning you can start with the features aimed at small businesses but move up to the needs of large enterprises when ready. Adding new applications is designed to be simple, offering a high degree of flexibility to companies that need it.

AFS offers advice on implementation and gives the option of hiring an implementation consultant, which will help a company navigate potential problems that might lead to implementation failure. They also offer onsite training of their ERP system.

## ALERE MANUFACTURING

ALERE Manufacturing is one of many business applications offered by TIW as part of their ALERE Business Applications product suite. ALERE Manufacturing is designed for use by small and midsize manufacturers operating in a range of industries.

With a focus on automating many of the day to day functions of a manufacturer, ALERE Manufacturing includes a finite scheduler which is able to handle both forward and backward scheduling. This scheduler can then be synced with the MRP module to produce just in time material planning report. This process can then release a work order, that includes all the necessary job information the operative needs to know.

Additional features of ALERE Manufacturing include the ability to edit work orders, adding or removing components, all while keeping the inventory up to date in real time. The system can integrate with ALERE Accounting to provide a single source for accounting and manufacturing requirements.

ALERE Manufacturing is deployed as an on-premise solution. A free 30 day trial of the software can be downloaded from their website.

## AXAD ERP

The AXAD advertising management system developed and marketed by ANEGIS Consulting is an ERP solution tailored for the media and marketing sectors.

Running on the Microsoft Dynamics 365 platform, the AXAD system covers all of a media business's workflows from inventory management through to sales, billing and delivery. Dynamics 365 allows you to plan, see, and change your business with agility.

One of the system's major advantages is the ability it gives its users to tailor roles to particular positions in house, empowering its users to use the software to its greatest advantage within particular organizations.

Because Microsoft Dynamics has an open code base, ANEGIS is able to build custom modules for specific AXAD users to support workflows that are particular to a specific media organization.

The system is fully integrated with the Salesforce CRM and can be used on both smartphones and tablets. It can control media and marketing campaigns running across multiple channels, allow collaboration between sales and marketing teams, drive marketing on social media channels, provide lead management and reporting and a suite of detailed analytics covering campaign penetration and financial success.

## BCFOOD

bcFood is a complete ERP system designed specifically to support the unique needs of food manufacturers, processors, and distributors both small and large. Beck Consulting has leveraged its more than 25 years of experience into the development of a solution that is rich in industry-specific features, aiming to provide a return on investment.

bcFood is built on Microsoft Dynamics NAV, the best-selling ERP application in the world. NAV is similar to (and integrated with) Microsoft products such as Excel, Word, and Outlook. Thanks to this familiar and intuitive interface, new users will discover a solution that is easy to learn. NAV supports any multi-company, multi-currency, and multi-language requirements that exist within an organization, and its unparalleled scalability makes easily configurable for 5 or 500 users.

The available functionality spans many different business areas, including ERP, supply chain and warehouse management, EDI, CRM, and reporting/business intelligence. NAV can be installed on-site, hosted, or accessed from the cloud. It is a great fit for organizations looking for a stable, reliable ERP solution that minimizes IT overhead while providing accurate, relevant data.

bcFood expands upon NAV's functionality, offering quality control features, advanced notifications, workflow capabilities, recipe definition, and more. The application supports real-time visibility into all transactions, and the ease with which information can be retrieved results in a truly relational data model with completely paperless functionality.

## BIZAUTOMATION CLOUD ERP

BizAutomation cloud ERP is a system designed to streamline back-office operations. It is fully integrated with other BizAutomation products to enable all business functions to operate through a single platform to increase efficiency.

Focusing on automation and simplicity, BizAutomation cloud ERP is suited for SMBs with needs to increase productivity while allowing management of several separate business functions through a single platform.

The software has extensive manufacturing and distribution tools. Warehouse management tools allow control of multiple external locations, along with internal locations such as aisles and shelves, meaning BizAutomation cloud ERP keeps businesses informed of requirements on a real-time basis. This helps prevent wastage and increase revenue.

Minimal involvement is required at each stage of the sales process, with a simple “one click” sales fulfillment process finishing off orders quickly following creation and a variable pricing and promotions system which adapts based upon analytics and reports from historical data and preceding months. Through an automated shipping process, integrated with parcel shipping services including UPS, FedEx, and USPS, BizAutomation cloud ERP aims to expand and improve on existing functionality, while also allowing businesses which already use these services to continue operating without skipping a beat.

## BUSINESS BY MILES

BUSINESS by Miles is a custom-built platform cloud-based platform designed for companies wanting numerous business functions in one bundle - including that need HR, accounting and CRM software. The platform is built with scalability in mind so that it can grow with the business it serves. It is a multi-tenant platform that at its largest can handle over ten thousand tenants.

All reports are customizable and available on the My Reports screen. This displays the reports you have created and those that have been shared with you, helping you to manage your view of your business from a single dashboard. The Calendar dashboard is designed to help professionals keep in contact with colleagues and prospects, offering a single screen view for requesting meetings and recording events.

Your managers also have access to data about employees, for help with HR management. This also means that managers can set up new BUSINESS user accounts without the need for IT intervention. Managers can also assign tasks to employees, linking this with an order, project or a subcontractor.

The platform comes with both a customer and vendor portal and has its own mobile app, used with iOS and Android. The customer portal gives your client view of payment history, their assigned project manager, and overall work summary.

**CSB-System**

## CSB-SYSTEM

CSB-System is an ERP suite of applications aimed at the food, pharmaceutical, chemical, cosmetic, and retail and logistics industries.

The CSB-System ERP suite is comprised of a breadth of applications with key uses that users can select based upon their requirements. Organizations searching for a corporate planning and management solution, companies looking to optimize execution and production cycles or firms intending to streamline process management will all find functionality to suit their requirements. Reducing capital commitment and stock levels via improved inventory management are one of the software's key product uses.

The key feature of CSB-System is its level of alignment with the food and pharmaceutical industries. For example, the bakery implementation has a procurement module designed specifically for the bakery industry and a supply chain management module tailored to accommodate grain and flour producers, bakeries and bread retailers. This level of specialization is consistent across the suite of applications, whether it is in fish, delicatessen, confectionery and more.

CBS-systems also offer M-ERP® software which provides mobile access to ERP systems. Features of this software include: no additional software on end devices, configurable masks, customizable applications and evaluations, automatic updates and online connection at any location worldwide.

CSB offer their ERP solutions deployed on-premise or hosted in a dedicated cloud. The suite consists of a broad range of mobile applications, meaning the software can be accessed anytime, anywhere and on a variety of desktop and handheld devices, including iOS and Android mobiles.

## DBA MANUFACTURING NEXT-GENERATION

DBA Manufacturing Next-Generation is a self-implementable ERP solution for manufacturing firms with up to 50 employees.

The package is designed specifically for small organizations and is quick to install and simple to use. In order to increase manufacturing efficiency, the software incorporates traditional ERP workflow processes but without the complex array of settings and parameters.

One of the software's key features is its simplified MRP module, which uses just six settings to drive job and purchase order schedules. The Rapid Item Creation tool allows users to add additional bills of material in just a few simple steps. An inventory value report enables users to quickly see their current and historical inventory valuations.

DBA Manufacturing Next-Generation's entry-level price point covers modules including inventory (tracking, unit costs, pricing); bill of materials (component notes, cost roll-up, multiple revisions); sales orders (mass price update, third party billing, order acknowledgement); material requirements planning (job days calculator, dispatch report, overlap scheduling); jobs (labor tracking, job tracking, subcontract services); purchasing (supplier/manufacturer cross-references, PO forms, serial number designation); and general ledger (accounts receivable/payable, banking, financial transfer).

DBA's ERP solutions are designed for self-implementation – including a “step-by-step series of sequential tasks and video training courses” – and their sales model is based on self-help evaluation tools, single package pricing, and a 180-day return policy.

## DEACOM ERP

DEACOM ERP is designed for organizations that demand multi-geographic batch or process driven manufacturing provision. The ERP has three interconnected USPs, these focus on user-friendliness, a multi-platform ubiquitous user experience, and intelligent scalability.

DEACOM ERP has a plethora of technical functions – from quality control to regulatory reporting. The ERP system is a standalone platform run off one set of code to minimize the need for complex bolt-ons and customization, though Deacom can also integrate with other software platforms, including Salesforce and PayPal.

Built with its own integrated accounting and financials, DEACOM ERP provides real-time transactional posting. Order entry, inventory control, job costing and integrated financials are also managed within the TEC certified DEACOM ERP software system.

DEACOM ERP's browser-based deployment makes the software easier to scale and distribute across multi-location organizations, this also means mobile devices can be used as functional workstations for the software. An on-premise ERP, Deacom can be specifically built for each individual manufacturer's needs.

Deacom provides a range of support services – including access to digital libraries, bespoke customer account managers, and 24-7 support services.

## DYNAMICS 365 FOR OPERATIONS

Designed as an intuitive cloud-based app for seamless enterprise management, Microsoft Dynamics 365 for Operations was developed to help businesses manage their operations requirements. It is primarily aimed at medium-sized organizations, subsidiaries, and divisions of larger companies, but can be used by anyone from small businesses to large multi-national enterprises.

The software was created specifically for the financial services, manufacturing, retail, and service industries. Microsoft Dynamics ERP offers automation of warehouse processes, global transportation planning and freight reconciliation and advanced demand forecasting functionality which uses Microsoft's SQL server forecasting algorithms. A POS system is available for retailers alongside integrated e-commerce and social media capabilities for those who sell online.

Dynamics for Operations is part of Microsoft's Dynamics 365 suite, which offers a range of enterprise applications, including sales, marketing, project service automation and customer insights. It is therefore particularly suitable for companies looking for a solution that will integrate with a suite of other software.

As a cloud-based system, pricing is calculated on a per-user basis. Unusually, Microsoft allows clients to differentiate between 'full' and 'light' users, and prices each type differently. Companies can choose to Dynamics 365 for Operations as a standalone app, or as part of a Dynamics 'plan' - a bundle of apps designed for a specific purpose. It can be implemented within an average of 5 to 10 days depending on organization size and how much data is to be migrated.

## E2 SHOP SYSTEM

Shoptech's E2 Shop System is a shop management system designed for job shops, contract, and make-to-order manufacturers of a range of sizes.

The estimating dashboard within the E2 Shop System allows the generation of quick quotes with a single click. It will provide all the information needed for costs of materials, labor, and overheads. This will also allow users to draw on estimates of past jobs and similar requests to speed up quotations to the customer. From here the platform will then generate the orders needed to fulfill the estimate to the customer, eliminating the need for redundant data entry.

Elsewhere, the E2 Shop System comes with many features, including estimating, orders, purchasing, scheduling, data collection, quality control, shipping, and accounting. The scheduling software is designed to maximize the use of machines and personnel and to avoid bottlenecks before they arrive. This system can manage customer what-if requests, as such hypothetical scenarios can be run through the platform and a response is given immediately. The E2 Shop System also allows users to track every job from a single screen – and the data is accessible via an iPhone app, which is free to E2 customers.

Free six-month support is available with all orders, this gives users access to an implementation specialist. Support is available via a live agent, who can be accessed by telephone contact, online chat or email support.

## EFACS E/8

EFACS E/8, from Exel Computer Systems, is an ERP system with a component structure, this allows the system to be customized to the requirements of the company.

The ERP can be applied to several manufacturing methodologies, including engineered-to-order, assemble-to-order, and made-to-stock.

EFACS E/8 is split into 6 components; product definition, material management, planning, CRM, aftermarket, and accounts. Each component is responsible for streamlining a different company process, each one can communicate directly with other EFACS E/8 components and third party systems via industry standard protocols.

Users of EFACS E/8 ERP will benefit from system-wide features such as document management, multi-language, and currency capabilities as well as a touchscreen interface and process automation.

EFACS E/8 can be hosted on cloud servers or at the user's premises, the system is browser based and so can be accessed via any desktop or via Android and iOS apps.

## ENTERPRISE 21 ERP

The TGI Enterprise 21 ERP is an integrated wholesale distribution software suite that provides a total sales order management solution which includes available-to-promise and capable-to-promise mechanisms that will improve order lines and reduce inventory carrying costs.

Enterprise 21 ERP can meet the needs of wholesale distributors due to its warehouse management system that is radio frequency and barcode-enabled. Users can also install Enterprise 21's distribution software functionality for procurement, inventory control, transportation management and other related features.

In addition, process manufacturers can utilize Enterprise 21 ERP's manufacturing software functionality that includes offering complete lot tracking, quality control, recall management, and specialty features such as recipe management.

Further functionality is also available to discrete manufacturers, who require support for attributed inventory, on-line product configuration, bill of materials management, component substitution, and outsourced assembly.

Enterprise 21 ERP is customizable and integrates alongside Windows and Oracle. The ERP software is also available in multicurrency and multi-language.

## EPROMIS ERP

Based in Houston, USA, ePromis Solutions offer a range of business applications, which integrate to become modules of a larger system. This integration with other modules means there no need for the duplication of data entry across the organization. The overall ePROMIS platform is designed to avoid departmental silos of data.

ePROMIS ERP is a customizable solution with industry-specific functions. In addition, the ERP platform comes with User/ Role-based access control, interactive graphical user interface, real-time dashboards, and integration with other standard business tools. Business Intelligence dashboards provide a graphical overview of the entire system – with reporting and analytics on key real-time data.

ePROMIS ERP is available in the cloud, on the web, as a hybrid, and as client-server based technologies. Deploying through the cloud allows secure and real-time access to the system from any location in the globe, with mobile access to ePROMIS ERP is available through native Android and iOS apps. This permits multi-location, multi-company, multi-currency and intercompany accounting.

ePROMIS offers a support portfolio that includes experts who follow industry best practice. Support can include consultation on customization in the Cloud, web-based, hybrid and on-premises infrastructures; implementation services; managed services; support and maintenance and training and knowledge transfer.

## EXPANDABLE ERP

Expandable Software is an ERP aimed specifically at growing manufacturers, offering a platform which can be adapted to the position of a business in its growth cycle. It is available in the cloud as a SaaS or as an on-site deployment.

The Expandable ERP suite is built on the Microsoft SQL platform for maximum flexibility. Users can benefit from a comprehensive range of features, ranging from 'core' functionalities like accounting and finance, reporting and manufacturing management, to extended productivity tools and a CRM module. There is an option to integrate Expandable ERP with Salesforce.

The SaaS model allows you to expand on demand. With a monthly subscription fee, you can purchase the basic services of Expandable ERP without a major upfront commitment. This can then be added to as you grow as an organization, both in terms of features and number of users.

The software is available wherever there is an internet connection, and there are native iOS and Android apps for use on mobile devices. Implementation of Expandable ERP takes eight to twelve weeks. Training and implementation support are available and only carried out by Expandable personnel.

## GENIALCLOUD PROJ

Avantune's Genialcloud Proj ERP is a cloud-based platform that offers many apps that can manage the business processes, allowing users to customize the software to the needs of their business.

The initial start-up and small business solution, called Social, offers free access to two users with access to Genialcloud Proj. The different levels of Genialcloud Proj depend on the number of users and the level of support you would want. As well as apps covering standard ERP features like BI and inventory, the professional suite can be extended with functionality such as CRM, SCM and HRM. It also includes document management and online meeting spaces. This covers up to 75 users and comes with a public cloud and a standard support bundle.

The Genialcloud Proj enterprise bundle is available for up to 500 users, a public cloud API and more storage space than the standard professional package. There is also priority support for enterprise bundle users, with dedicated support for up to 1000 users. It comes with a private cloud, with its own API, a metering and monitoring dashboard plus storage.

The final level of service is Enterprise +, which is an onsite, server installation with dedicated support to fully customize and manually coordinate the services provided by the ERP.

## GLOVIA OM

Glovia OM is an ERP solution by Glovia Fujitsu aimed at manufacturing and distribution companies and designed to integrate with the Salesforce Platform.

The software design is centered on sales and is suitable for manufacturers and distributors that wish to improve their visibility and control over their sales, production and distribution processes. It aims to improve sales executions and shorten the sales cycle while improving warehouse operations such as inventory management and fulfillment. It is ideal for teams currently using Salesforce software. Multiple languages and currencies are supported, making it suitable for multinational organizations.

The key feature of Glovia OM is its integration with Salesforce packages. The look and feel of the Glovia technology are the same as the Salesforce application and the solution runs as a native application on force.com. It extends the Salesforce capabilities by providing visibility throughout the entire supply chain with an intuitive workflow and Salesforce-esque screens. Drop shipment, quotation management, and purchasing tools are all included.

Glovia OM comes as a Salesforce.com hosted, cloud-based solution available on desktop and mobile via any standard internet browser. Pricing is based on a per-license subscription basis.

## HARRISDATA ERP

HarrisData ERP is a software solution aimed at medium sized manufacturing organizations.

The package is suitable for companies looking for a simple to install, easy-to-use ERP solution that incorporates finance, distribution and manufacturing. It is designed to accelerate a firm's time to value and lower the total cost of ownership of their products and processes.

Alongside an intuitive inventory management and shop floor activity tracker is a powerful accounting module that manages general ledger, payables and receivables. An additional HR module handles employee benefits, payroll and attendances.

HarrisData offer their ERP software as a SaaS solution. While it is primarily a web-based, cloud hosted solution, the firm will also install the ERP software on premise on request. It is accessible via any desktop or mobile device with web browsing capabilities.

## IFS

IFS develops agile enterprise software for companies who manufacture and distribute goods, maintain assets and manage service-focused operations. Their ERP is used globally by manufacturers and other asset-intensive organizations, like offshore oil and gas drilling, aerospace and defense, and construction.

IFS Cloud ERP supports workflows for multiple manufacturing business models, and due to its emphasis on flexibility can be customized to companies' specific needs. Multi-site, multi-currency and multi-company support make the system ideal for larger companies who work over multiple locations.

The system offers features which go beyond standard-level ERP functionality, offering a fully-embedded CRM alongside native functionality for Enterprise Project Management, Enterprise Asset Management, and Service Management. It can also be integrated with a variety of third party software for extended functionality.

The ERP is built on a service-oriented architecture and can be accessed as a web application. IFS offers a range of consulting services to clients - these include implementation project management, personalized software development, and technical consultancy.

## INTACCT

Intacct is a cloud-based ERP solution provided by California-based software company Intacct. It is in use by companies of all sizes and is particularly useful for professional services firms and consultancies.

---

Created to help businesses drive growth and increase efficiency, Intacct has a strong focus on financial management and reporting. The ERP software delivers a depth of financial capabilities that are often not found in standard business software suites and is the only mid-market cloud ERP with a multi-dimensional general ledger and full reporting mechanism.

Intacct offers companies the flexibility to build the package around their own individual needs, rather than forcing them down an “off the peg” approach. Other key features include accounts, real-time user dashboards, and purchasing.

As Intacct is a cloud-based solution, all information is stored in one easy to access place, so real-time reports and data can be obtained at any time, from any place. The company offers ongoing training and support and encourages long-term relationships with clients through its Customer for Life program.

## INXSQL

Integrated Inventory Solutions flagship ERP software suite, INxSQL (pronounced in-sequel), is a fully-integrated system tailored towards the specific demands of distributors, wholesalers, and industrial resellers.

INxSQL is developed using the Microsoft .NET platform, the company expects that building the software this way will mean most users will be more familiar with the interface. A key feature of the ERP is the management dashboard, this real-time data display offers a range of reports on the company's performance, some of which include a daily snapshot, inquiries by customer and inquiries by a vendor.

Using Microsoft's industry standard SQL Server database and Visual Studio, INxSQL can be integrated with UPS WorldShip and FedEx systems, supports territory sales operations through remote database synchronization (orders sent in; price changes, quantities and customer data sent back) and features a dedicated EDI application.

INxSQL is installed on-premise, upon selection of the ERP Integrated Inventory Solutions provide a project manager to support the IT department with hardware installation and software requirements.

## IPTOR ERP

Iptor produces two ERP solutions; ERP for distribution and ERP for publishing. Both are suitable for businesses of any size.

The distribution-based software is aimed at E-commerce distributors that want to optimize their operations while improving their visibility on their client's behaviors, and relationships. It is suitable for companies aiming to move towards lean and agile methodologies. Similarly, ERP for Publishing is geared towards distributors of content and is ideal for publishers who want to better understand their clients and their patterns of behavior.

Both solutions are made of a set of core functionalities, which include order processing, billing, returns management, inventory management, accounting, and shipping. Industry specific modules can then be added on as required. A key feature of the distribution package is the inventory and distribution module, which allows real-time optimization of the goods handling process. ERP for Publishing comes equipped with dedicated royalties, rights, permissions and contracts handling tools that allow users to proactively manage all of the financial aspects associated with publishing.

Iptor ERP is a cloud-based solution, available via web browsers on both desktop and mobile devices. The firm operates on a SaaS and IaaS basis.

## JOMAR ERP

JOMAR's ERP and Enterprise Application Suite is aimed at medium to large sized organizations in manufacturing and distribution.

The suite contains a plethora of modules, from billing to manufacturing execution, and is, therefore, suitable for any organization searching for a single and comprehensive ERP solution. At its core is a set of manufacturing modules designed to minimize product cycle times, reduce costs and reduce the need for reworks or scrap.

Jomar's manufacturing execution system is one of the solution's key features. It includes forward and backward order scheduling, barcoded work orders, shop floor tracking and interactive scheduling boards. The advanced planning and scheduling module provide organizations with enterprise-wide visibility to minimize works in progress and maximize throughput.

JOMAR ERP is a cloud-based solution, accessible by Windows and Linux operating systems or via JOMAR's native mobile applications.

## JUSTFOODERP ENTERPRISE EDITION

JustFoodERP Enterprise Edition provides food companies a software and services package to address the complexities of large food processors and distributors dealing with high transaction volumes and multiple locations. Typically, JustFoodERP Enterprise Edition is suitable to companies between \$50 million to \$750 million in sales, or 25 to 200 users.

JustFoodERP industry experts work with your team to implement best practices in key areas such as production, inventory, supply planning, food safety, and sales & marketing; while preserving the specific requirements that make your business unique. The company provides a development platform that enables companies to tailor the experience specific to their requirements. This could include modifications of screens, tables, reports; or the creation of interfaces or new business logic. All of this while preserving an upgrade path to future releases whether deployed in the cloud or on-premise.

JustFoodERP Enterprise Edition includes all the features in JustFoodERP Professional Edition, as well as EDI and Advanced Forecasting, with the optional modules of Multi-site Management; and Development Toolkit for Infrastructure Management, with Microsoft in the Cloud options: CRM; SharePoint Online; and Office 365.

Food companies such as The Original Cakerie, Bruce Foods, DeMet's Candy Corp, Ainsworth Pet Nutrition, Creative Food Ingredients, Vita Pakt, TW Garner, and Fresherized Foods have implemented JustFoodERP Enterprise Edition.

## JUSTFOODERP FOUNDATION EDITION

JustFoodERP Foundation Edition delivers food processors and food distributors a software application and a risk-reduced implementation that will address their business needs while providing a platform into which they grow. With the Foundation Edition, you get everything you need now and in the future – so your food company can get started on integrated ERP with an option to grow into more capability as your business needs change and expand. This lets you unlock more functionality or add additional users when it's the right time for your business. It also takes a fixed price fee approach to training and implementation.

JustFoodERP Foundation edition includes all the core functionality most growing food companies require when transitioning from an accounting system or have a heavy reliance on Excel. After implementation, customers on Foundation Edition can move up to the richer functionality of Professional Edition as required and can choose between an on-premise deployment or cloud.

JustFoodERP Foundation Edition includes the modules for financials, sales, purchasing, inventory management, costing, production, traceability & recall, quality management; and reports. Some warehouse management functionality, and Microsoft in the cloud – SharePoint Online, and Office 365 – are options in the JustFoodERP Foundation Edition.

Food companies such as Almondina, Sahale, Suncore, American Sprinkle, and Ellison Bakery have implemented JustFoodERP Foundation Edition.

## K3|FASHION

K3|fashion is a cloud-based wholesale processing software designed for the needs of large companies in the fashion and apparel industry. It is embedded in Microsoft Dynamics 365 for Operations and covers the entire 'concept to consumer' process. The software can also come "made to measure", meaning the client can design the tools that meet the need of the organization.

K3|fashion comes with color, size and fit handling – meaning it can deal efficiently with multiple product dimensions. The user can set up an aggregated view of products, using their own parameters, and omnichannel planning features allow real-time visibility of data, giving insight where it is needed by the client.

There is the standard option of sales order management but also the more bespoke fashion requirement for season management. This allows for pre-season planning for collections at the same time as in-season planning with open-to-buy information.

The data in K3|fashion can be made visible by role across the organization and can also improve the collaboration between design, procurement, and manufacturer and the supplier to the retail store. Functionality includes product management, wholesale and retail options.

## KECHIE ERP

Kechie is a suite of ERP business applications aimed at small to medium-sized organizations in manufacturing, distribution, and retail.

As a complete ERP package, Kechie ERP is suitable for companies looking to automate their procurement processes, sales order management, and inventory management in a single, scalable solution. Real-time automation is at the heart of the software's design, meaning reports and data are updated each time a transaction is made. The platform is highly customizable, low-cost and simple to implement.

One of Kechie's key features is its sales order management application, which comes with detailed customer profiles, customized invoices and a real-time quotations, invoices and orders tool. The procurement and purchase order management tool is a detailed and customizable supply chain application that encompasses inventory control, supplier management and purchasing.

Kechie is a web browser based application hosted in the cloud, compatible with Mac, Windows and mobile applications. Pricing is based on a per user, per month subscription model.

## KENANDY ERP

Kenandy provides a cloud-based ERP solution for mid-sized manufacturing and distribution companies. Kenandy is used across a wide range of industries and aims to facilitate business innovation and expansion.

Natively built on the Salesforce App Cloud, Kenandy cloud ERP allows customers to map their ERP to their existing business processes, rather than the other way around. It is fully customizable, allowing users the flexibility to mold an ERP solution as their business grows.

Kenandy focuses on four key areas:

- Order-to-Cash: maximizing sales and revenue through managing quotes, pricing and orders.
- Manufacturing: boosting output and speed products to market through effective production and inventory management.
- Supply chain: optimization of procurement and elimination of waste through automation of purchasing and materials management.
- Global financials: visibility into financial information across your business and easily manage accounting and taxes.

The system is cloud-based, so can be accessed by any device with an internet connection. Kenandy also provides training throughout the ERP implementation process, with support continued after go-live through phone, web chat, forums, online tutorials, and webinars. In addition, Kenandy can be integrated with a number of other software systems, including Avalara AvaTax, HiBiz, and Vertex.

## LILLYWORKS

LillyWorks is a manufacturing-specific ERP suitable for small and medium sized businesses. Designed with transparency and efficiency in mind, LillyWorks aims to enhance organizations' abilities to meet deadline through a range of automated features and analytics functionality

LillyWorks offers a real-time task list that can adjust itself to changes and predict future challenges to your schedule. By automatically adjusting your plan in line with scheduling changes, the software aims to increase clients' ability to hit deadlines and reduced lost revenue

LillyWorks also offers a "GPS" analytics tool that can identify potential delays, bottlenecks, and material shortages in advance so that appropriate action can be taken to avoid them. Another key automation feature is its ability to release jobs to maximize the flow of materials to sold products. Alongside these, LillyWorks offers a range of core ERP features with some extended functionality, such as document management, shipping and supply chain management and customer service.

The ERP software is cloud-based, with mobile access available through a web app. LillyWorks pricing is calculated on a per user/month model, with implementation taking around two to three months. LillyWorks can provide implementation support and user training online or onsite depending on clients' needs.

## MAXLIFE ERP

MAXLife extends Microsoft Dynamics AX's capabilities by addressing the strict quality and compliance requirements that manufacturers and distributors of FDA-regulated products must meet. This is achieved by enabling quality control and quality assurance processes to work as part of the ERP system and to be transparently available for reviewing and reporting.

Servicing industries such as pharmaceuticals, medical, biotech, manufacturing and field services, MAXLife ERP is an industry specific software catered to the needs of life sciences focused companies.

As MAXLife ERP uses Microsoft Dynamics AX as its platform the application comes with all of the specifications from the original product, including; cloud and on-premise installation, multi-language and currency plus a customizable interface and mobile compatibility.

With MAXLife, you can track product quality, proactively see and respond to manufacturing variability, meet GMPs, Sarbanes-Oxley, and 21 CFR Part 11 and Part 820 requirements, plus simplify computer systems validation.

## NIX86

Nix86 is a mobile and web e-commerce solution that manages the wholesale procurement process for the foodservice sector. The ERP software offers companies who supply restaurants and retailers a direct link to their customers, who can place an order using their mobile device.

The benefits of such platform not only include the reduction in error and the saving of time but also flexibility for your customer and the saving in money that is available for the distributor and the retailer or restaurant. Once the order is sent, it is checked against the contracted terms with that customer and then digital copies of the order are sent to both customer and company.

There is no need for manual data entry with Nix86 as ordering is an integrated part of an ERP, customers' details will be available and the entire product catalog is there for them to view. One click ordering speeds up the process, and clients can add in special instructions if needed. The distributor can also receive the order on a mobile device and deal with any issues as soon as they arise.

Nix86 is a cloud-based solution, with native iOS and Android apps available for mobile usage.

# ParityFactory

## PARITYFACTORY

ParityFactory provides inventory control solutions for food processing companies. As well as taking care of warehousing of perishable goods, ParityFactory will monitor food safety and assist with compliance and reporting requirements.

The software is built for the factory as it is streamlined to work on mobile screens to be available where your staff are working and is available as both a cloud and on-premise solution. Key features include real-time inventory, end-to-end tracing, and a paperless shop floor.

ParityFactory automates materials control using a combination of modern software, ERP integrations, and your factory equipment. There is the option for GS1 scanning and labeling, SQF traceability and yield calculation. You can also label and order, tracing solutions. With these tools, ParityFactory aims to automate and simplify the lifecycle of food production – giving the manufacturer a precise data-driven picture of the factory floor.

The ERP software integrates with other key business systems like Quickbooks, Dynamics, Sage, and Intacct. Automated ERP integration helps reduce errors by importing sales orders and purchase orders, then updating the ERP systems with order receipts, real-time inventory and sales orders in real time.

## PK7

PK7 (formerly Rapid Response Manufacturing) is a software solution aimed at small to medium-sized manufacturers and job shops. The solution is designed to increase manufacturing efficiency, particularly in the areas of inventory management, labor tracking, shop floor scheduling and communications. It enables manufacturers to reduce carried inventory, improve inventory accuracy, improve cash flows and increase their on-time delivery rates.

The materials requirement planning and manufacturing execution system modules are two of the solution's key features. Together they improve users' visibility of shop floor operations across the entire enterprise by providing real-time reporting that integrates with bar code scanners, RFID badges and touch screens. The quality, non-conformance and defect tracking module is another powerful tool that enables manufacturers to identify and deal with sources of waste and reworks in their production lines.

ProfitKey ERP is deployed on premise and comes with a web based mobile suite to give users access anytime, anywhere.

## PRIORITY ERP

Priority ERP is a software solution, originally developed for the manufacturing industry. The ERP has since evolved to cater for industries including fashion and retail, logistics, healthcare and financial services.

Priority ERP is intended to be an 'all-in-one' ERP package and a single solution for company's business requirements. Flexibility, scalability, and affordability are at the heart of the design, and Priority claims that the total cost of ownership is up to 70% lower than similar ERP systems on the market. It is ideal for firms looking to quickly implement a single ERP system that does not require intensive, ongoing maintenance.

Key features include a multiple languages, currencies and built-in support for multiple tax jurisdictions. A WMS also comes integrated, allowing firms to synchronize inventory data between the systems. Project management, supply chain management, sales, and marketing modules are all also included. A built-in POS module is available for retailers, while logistics companies can benefit from integrated supply chain management.

Priority ERP comes in three packages each geared towards businesses of a certain size; Zoom, Pro, and Enterprise. The latter also comes as a hybrid solution, allowing companies to retain existing software installations. Priority ERP is offered both as an on-premise and cloud solution, both of which deliver 100% system functionality, this allows users to access their data in real-time from mobile devices and tablets. To date, 1,500 customers successfully use Priority in the cloud.

## PROCESSPRO ERP

ProcessPro ERP is specifically designed for batch process manufacturers; this includes the food and beverage, nutraceutical, pharmaceutical, cosmetic personal care and specialty chemicals sectors. The ERP is designed with FDA compliance requirements high on its list of priorities.

ProcessPro ERP links all information in a business intelligence functionality. There is real-time visibility of information, the platform helps to organize and track manufacturing processes, planning, and execution, inventory management, quality assurance, compliance, financials, sales and more. It is designed with mission-critical functionality in mind. It includes such options as formula and recipe management, lot traceability, purchasing, general ledger management through to contract management, to name but a few of the functions available.

The ProcessPro ERP has a single dashboard that can provide such options as a graphical snapshot of productivity to more granular details of project financials. There is the option to run reports, drilling down into transaction details and then share this information.

ProcessPro ERP is available through the cloud or on-premise, with native iOS and Android apps available for use on mobile devices. ProcessPro offers live, dedicated assistance from the team at the corporate offices in the US. The platform is not offered by third-party installers - instead, the complete package of sales, installation, support, and development is offered by ProcessPro themselves.

## QAD ADAPTIVE ERP

QAD Adaptive ERP combines deep manufacturing ERP and supply chain capabilities with a modern platform and user experience. This helps manufacturers effectively respond to change in their industry – and simplifies the experience of running a secure, dependable, global cloud ERP.

QAD Adaptive ERP enables manufacturers to maximize the return on their ERP investment by easily achieving greater levels of fit today and rapidly responding to change tomorrow. It is built with industry best practices for global manufacturers based on QAD's deep industry-specific expertise. The result is faster implementations and greater fit out of the box.

Built on the QAD Enterprise Platform, QAD Adaptive ERP makes it easy to develop and maintain "last-mile" functionality that provides manufacturers with their competitive advantage. Extensions and new apps can be created in a low code/no code environment and, unlike intrusive customizations, do not create rigidity that interferes with upgrades.

## ROLE-BASED WORKBENCH

WorkWise ERP is a suite of software aimed at North American manufacturing and engineering companies.

The software is designed for growing manufacturing firms to streamline operations, improve efficiencies and manage complexity. It is role based, rather than module based, meaning users can assemble their own views and don't have to spend time switching between modules for different functionality.

The Role-Based WorkBench suite includes 45 applications that provide a range of functionality essential to manufacturing organizations. These include advanced forecasting, CRP, MRP and MPS functionality. There is Solidworks CAD integration, inventory and bill of material functionality and powerful shop floor control tools. There are also financial applications, including costing, cash management, and payroll.

The software can be deployed in the cloud or on premise and is accessible via native iOS and Android applications.

## SAGE 100CLOUD

Sage 100cloud is a financial and accounting solution created for small and medium businesses. It is particularly helpful for the financial teams in businesses and not-for-profit organizations who want to automate their processes, connect employees and gain valuable insights to help them become more efficient.

Sage 100cloud is designed to enable teams to manage more than just their accounting work; it encourages team working and compliance and offers lots of add-ons to meet individual organizational requirements. It is quick to set up and helps businesses avoid common transcription errors that can happen as a result of working with spreadsheets.

Sage 100cloud's core features are based on financial management, inventory, distribution, and sales/order management. The software has been designed to integrate seamlessly with the rest of the Sage suite and is available on iOS, Android, and web-based devices.

As Sage 100cloud is a cloud-based system, users are able to access all their important data at any time, on any device, and gain real-time insight into their daily business operations.

## SAGE 300CLOUD

Sage 300cloud (formerly Sage Accpac) is an enterprise resource planning (ERP) software system that serves small and medium-size businesses in professional services, financial services, public sector, and other markets such as distribution and wholesale.

Sage 300cloud takes the complexity out of managing your business finances across borders, in multiple currencies and locations.

Some core features of Sage 300cloud are:

- Manage multiple companies and currencies – Sage 300cloud makes it easy to set up and manage multiple companies, close books, and report results by company or consolidated company.
- Eliminate international business complexity – With Sage 300cloud, you can maintain an unlimited number of currencies and exchange rates, get daily updates, and automate the gains or losses from fluctuations.
- Simplify inventory management – Ship orders on time, from multiple locations. Simplify your inventory—including shipments, returns, and adjustments—with multi-location inventory tracking.
- Automate your finances – Simplify your monthly bank reconciliations. Detect unrecorded transactions, errors, and differences, and easily correct to reconcile your books with your bank statements.

## SALESORDER.COM

salesorder.com is a cloud-based inventory and order management solution designed specifically for distributors, wholesalers and e-commerce businesses. Popular with companies looking to upgrade from QuickBooks or find a less-costly alternative to Netsuite, salesorder.com aims to provide an alternative to 'Frankenstein' inventory and order management software by providing a fully integrated solution with strong order management and accounting functionalities.

salesorder.com is designed to scale with your business, so offers tax-agnostic multi-currency accounting with real-time cash flow visibility. The software offers adaptable automated workflows for any order management model and is highly customizable - users can perform many adjustments with a single mouse click.

The CRM module with salesorder.com can be integrated with Gmail, Outlook and other IMAP compatible email providers, whilst order management functionalities integrate with a wide range of online marketplaces, including Amazon, Ebay, Etsy, Alibaba and Walmart Marketplace.

salesorder.com is cloud-based, and so can be accessed on any device with an internet browser installed - though, for mobile access, iOS and Android tablets work best. Implementation typically takes four to five weeks, with training, customization and implementation support services also offered.

## SAP BUSINESS ONE

SAP Business One is an ERP that helps small and medium sized businesses to manage business processes. The ERP software is a series of integrated modules that function to link once-isolated departments within an organization. This software is sold on its capacity to automate back office functions, particularly in financials and operations.

SAP Business One aims to allow professionals to access data silos that were once isolated, meaning that the business can work seamlessly without relying on competent communicative performance from employees. The ERP can integrate levels of a business vertically and horizontally. A vertical application of the software can integrate all areas of operation, from planning, through development, to manufacturing, marketing and then sales.

The flexibility of SAP Business One and its customizability is thanks to its module structure - each module can be individually purchased and integrated into the whole. The methodology behind the software allows organizations to draw in business intelligence, CRM, and project planning to name just a few.

This is a Microsoft Windows-based ERP product that can be delivered through the cloud or installed onsite onto the client server. There is also functionality for users to work on mobile devices with the ERP. This function can be customized so that certain employees only have access to certain modules.

## SAP ERP

SAP ERP is one of the largest adopted software systems worldwide. As a multi-language and multi-currency system with offices worldwide, SAP ERP is suitable for global businesses looking for complete business process management software.

SAP ERP software can be operated in over 35 different languages. Covering the entire manufacturing process, the core ERP module includes all the usual ERP features plus HR and finance. The company provides regular upgrades which can be made available selectively to one or many business functions within an organization.

SAP ERP is built to cater for many industries from process manufacturers in the pharmaceutical business to insurance firms, wholesale distributors, higher education organizations and more.

SAP ERP is an on-premise system accessed via a web interface and runs on a variety of operating systems. Further modules can be purchased which enable SAP ERP to integrate with cloud services and there is a mobile interface allowing the system to be used on smartphones and tablets.

[VIEW COMPLETE PROFILE](#)

## SAP S/4HANA

SAP S/4HANA is a modular ERP offering large-scale integration of different business functions across an organization. It works to cover all day-to-day processes and offers integration with other data silos, including CRM.

SAP S/4HANA is a business suite of software that moves beyond mere interconnectivity towards offering real-time data and decision making support, using both internal and external sources of data. One such decision-making process that the software offers is the ability to draw data together to calculate the value of individual business cases. This can be scaled up as far as simplifying the process of calculating the value of the business as a whole.

SAP S/4HANA can be delivered as a cloud solution or installed on-premise and can be either an upgrade of previous SAP ERP software - which can be installed in around six months - or a new entirely customized solution. This means that a team comes in and builds from the ground up. This option offers a cleaner and clearer software solution but can take substantially longer.

The change in the modelling of data, which allows for decision-making functions, requires a full migration of data. This can be time consuming whether working with a previous SAP product or starting from scratch.

## SCIPIO ERP

Scipio ERP is an open source system that combines business applications with a webshop in one package.

Scipio ERP comes with a templating toolkit that gives support with layout and helps the process of getting started. These templates are customizable, and all themes within the platform can be extended and adapted to specific company needs. It comes with an extensive list of applications, including core functions like financials and order management and extras like CRM and can run in a clustered and multi-tenant environment, which makes the platform highly scalable.

Scipio ERP comes with a Magnolia connector for easy connection with other business applications - all the data available in your ERP system is also available in your Magnolia pages. It also integrates with Apache Ofbiz, which offers platform-independent technologies, security, performance, and scalability.

The platform is free in its basic form with support offered by the Scipio ERP Community, though there is an additional annual fee for professional support and warranty options. Implementation takes around nine months, and Scipio offers full implementation support for the duration. This includes technical and general implementation consultancy, user training and maintenance.

# Standard ERP

## STANDARD ERP

Standard ERP is a software solution by HansaWorld aimed at organizations of all sizes.

The software is suitable for established, mature and growing organizations looking for a comprehensive ERP system with an integrated CRM module. It is designed to extend software availability throughout an organization while reducing the reliance on interfaces between applications. It is modular, meaning it can be easily tailored to an organization's requirements. Standard ERP also has a series of modules designed specifically for certain industries.

One of the HansaWorld's Standard ERP package's key feature is the eBusiness module, which consists of a real time web engine that allows users to quickly create websites and update content in minutes. There is also a powerful reporting and analytics tool, with customizable graphical analysis and dashboards to facilitate the exploration of turnover and profitability across the entire business.

Standard ERP can be installed on-premise or hosted in the cloud, it can be run on Unix, Linux, Apple OS and Windows and it is accessible via a web browser on a range of mobile devices. Pricing is based on a per user, per month subscription model with additional charges for extra modules.

## SYNERGYERP

UBS aims to produce ERP solutions that employ accounting software best practice methodology in combination with expertise in a number of specific industries. It currently supplies its systems to a range of industries including: industrial sanitary supply and packaging; re-distributor, master distributor and wholesaler; food service; process manufacturer; fine paper; and building materials.

Targeting improved customer efficiency and customer service – as well as reduced operating costs and increased profitability – UBS's flagship ERP product is SynergyERP; a .NET framework-based system designed to capitalize on the flexibility of browser-based solutions.

SynergyERP is essentially the tenth release of former UBS product Paper Master: after the ninth edition, the company retooled and rebranded Paper Master, its main ERP solution, to provide a more modern, visualization-based interface.

Its modules, broadly divided into Product Master and Company Master, include: inventory management & purchasing, sales & pricing, warehouse management and financials.

Built on the existing UBS platform, SynergyERP is platform independent. Launched in a browser over intranet, it is intended to bring about single-source deployment benefits in terms of security and versatility.

## SYSTEM I-SUITE

System i-Suite is an ERP developed by American Software. It is targeted at manufacturing companies who need an end-to-end ERP solution with specialist support for made-to-order goods.

Its core manufacturing and supply chain modules are the same as those found in its sister product System z-Suite, and it also offers the same integrated accounting functionality. What separates the two products is i-Suite's added customer order processing system, which offers support for made-to-order and configure items and contains an integrated database for management of customer information.

i-Suite also offers an advanced integrated document management module not available with z-Suite. System-generated documents such as acknowledgements, invoices, purchase orders, pick lists and reports can be automatically captured and stored for retrieval using the document management system client or a web browser. Users may also scan and retrieve documents that were created outside the ERP system.

## VICINITY SOFTWARE

Vicinity is a scalable technology partner serving formula-based manufacturers in the chemical, food, and brewing markets.

Powered by a team of software developers, technical experts, and business consultants all based in the U.S. They are known for introducing the first software product for formula-based manufacturing in the Microsoft Dynamics® reseller space according to the team at Vicinity.

Vicinity helps businesses operate with ease, produce superior products, and drive smart growth with a software system that accommodates the complexities of formula-based manufacturing. Vicinity software allows you to eliminate outdated, basic, or multiple disjointed systems, and start maximizing your manufacturing capabilities.

Vicinity's scalability makes it a good choice among chemical manufacturers, food producers, and brewers. It integrates easily with key platforms—including QuickBooks or Microsoft Dynamics—to deliver a comprehensive software solution that grows with your business.

By delivering robust and flexible software, Vicinity help formula-based manufacturers manage limitless recipes, improve inventory visibility and control, enhance quality assurance, eliminate redundancies, and reduce costs. They are committed to providing a valuable, feature-rich solution at an affordable price that is accessible to businesses at any stage of growth.

## Onfinity (formerly VIENNA Advantage)

Onfinity ERP is an open source ERP with an emphasis on scalability. It aims to remove the need for extensive data entry and report building.

The ERP software aims to provide data on demand and a range of workflow tools. These tools include BI and reporting; email and SMS integration; time management and task management. There is also the option to have an internal chat between users, which can be recorded and time-stamped. The dashboard allows for self-configurable management dashboards and alerts to allow users to tailor the ERP to their needs.

Onfinity is available as an on-premises or on-cloud solution and is broken into core modules that allow users to create a customized solution. Options include a finance module, an inventory module, purchasing module, order management module and a help desk and support module. The features of this platform can be accessed on mobile devices, using a simple API.

The company is based in Germany but has a strong partner network on all continents. This allows Onfinity to offer localized and business-specific support, which includes the automatic routing of service requests to the right people and will be escalated as urgent where necessary.

## VISUAL ERP

Visual ERP is a manufacturing software system aiming to improve a manufacturer's competitive advantage. The software system is suitable for small to medium sized businesses in a range of industries.

Visual ERP allows organizations with multiple companies and sites to manage their processes from a single database. A simple and intuitive interface gives authorized users quick and easy-to-understand visual information covering inventory, material supply and demand as well as production schedules for multiple plants and factories. It allows manufacturers to build a custom product for a particular order and to configure existing stock for a regular customer.

The system has been built to allow integrations with third party applications including other ERPs, serial control and dimensional inventory tracking. VISUAL ERP is able to operate in multiple currencies and across multiple languages and can be configured for an organization to run in a single database or across several.

Visual ERP runs in a Windows environment but is accessible from any web browser and mobile phones. Synergy Resources also offer their own cloud hosting service as well as on-site installation.

## VISUAL ERP.NET

VisualERP.net is an ERP software solution, from VisualNext, that caters for retail and manufacturing companies in the fashion and soft goods industries.

VisualERP.net is built on the latest Microsoft technologies including SQL Server and Silverlight and the software comprises a broad range of fully-integrated modules that can be customized or configured. These modules include supply chain management, product management, inventory control, sales, credit and factor management, purchasing and supplier management, EDI, production, packing and distribution, accounting and detailed, real time reporting.

Able to work alongside all Microsoft products and other databases such as Oracle, VisualERP.net is configurable and customizable and is available in multi-language and multi-currency. It is also scalable so can suit companies of all sizes.

Visual ERP is available as a web-based product but can also be implemented by companies on-premise. Bolt-on modules can be added, including enhanced business intelligence tools, or CRM functionality.

VisualNext provides a range of partner products to enhance ERP functionality including integrated Ecommerce and online payment technologies, product design software, IT security and backup options.

## VISUAL ESTITRACK

Visual EstiTrack ERP is an on-premises shop management system that runs on all current Microsoft operating systems. Both single and mixed-mode manufacturing are supported. The system also includes barcode tracking, costing, scheduling, Gantt charts, a visual shop floor, material management, purchasing, shipping, and quality management.

A fully integrated and comprehensive accounting solution, Visual Books, is optionally available. Visual EstiTrack interfaces with the on-premises QuickBooks accounting solution.

Visual EstiTrack ERP's revolutionary Touch Scheduling Board allows managers and operators to communicate throughout their shop using touch screen monitors. The Touch Scheduling Board's drag-and-drop tools, automated scheduling, and real-time operations monitoring enable staff to easily view priorities, order statuses, and due dates.

Visual EstiTrack is an ideal fit for the small and medium-size job shop owner seeking comprehensive ERP functionality, affordable pricing, and speedy implementation. Henning Software products support multi-currency and multi-site operations.

## WINMAN ERP

WinMan ERP is a fully-integrated, on-premise ERP system designed for the needs of small to medium sized manufacturing and distribution companies. It supports multiple currencies and languages and is used across a wide range of sectors and industries.

WinMan ERP is customizable to your business needs. Event driven messaging, process controls, user defined fields, and plug-ins allow WinMan to be tailored to your business process. This flexibility incorporated across financial management, warehouse management, CRM, product configuration, eCommerce and retail management aims to provide a powerful solution for your business demands.

WinMan ERP is a Windows-based system which is developed using 100% .NET managed code. This makes it particularly suited to environments which use Microsoft SQL servers and associated tools. The software also focuses on encouraging lean manufacturing and distribution practices by integrating and refining both traditional and contemporary methodologies.

The ERP software is installed on-premise, with mobile access available through WinMan Go - a wireless transaction system which connects mobile devices to the backend system. WinMan can also provide portals for customers and staff, allowing for more efficient order processing and resolution of customer service issues. Implementation takes between three and six months, depending on system functionality.

## XTUPLE ERP

xTuple is an open source ERP and supply chain management solution. Developed with the collective efforts of tens of thousands of users worldwide, xTuple is generally used by service providers such as trade show management, telecommunications, wellness products providers and government computer networks.

xTuple is designed for companies which have outgrown spreadsheets and reached the full limit of Quickbooks or Sage, and who want to grow further without mass expenditure on software. Users can fully automate certain business processes, such as taking orders, scheduling production, maintaining an inventory, maintaining records and making sure financial data is synchronized across the company.

The software provides decision-makers with real-time information and reporting, providing enhanced visibility across the supply chain. xTuple can assist with key compliance requirements, and additional CRM functionality helps manage leads, track customer buying habits and manage employees remotely.

xTuple is a cloud based software that comes with a web portal. This can be an eCommerce store, a private resource center, a catalog of products amongst other options. The basic package will give you access to support, if you do not have your own software developers, with technical set up and configuration of the standard system. If you purchase the premium package you will get additional support hours that will help you customize the software.
