# CSB-SYSTEM

# EXTENDED PROFILE

CSB-System

## OVERVIEW

CSB-System is an ERP suite of applications aimed at the food, pharmaceutical, chemical, cosmetic, retail and logistics industries.

CSB-System is available in three editions, scaled to the size and structure of the business deploying it:

1. **CSB Basic ERP** is the preconfigured, industry-specific package built for small and medium-sized businesses. It gives them fast, standard access to core ERP processes, plus traceability and quality management, without the finance and controlling functions or in-house IT team that a larger deployment would need — designed to be quick and comparatively inexpensive to implement, and available as a cloud version.
2. **CSB Industry ERP** is the most comprehensive edition, aimed at larger enterprises that want a single system covering the entire value chain, horizontally and vertically. Unlike Basic ERP, it includes finance and controlling, customizable processes, and interfaces with production equipment and machinery, and it scales modularly from a single process up to full company-wide coverage.
3. **CSB Factory ERP** is built for corporate groups and multi-site businesses that already run a Group ERP. Rather than replacing it, Factory ERP connects to that parent system through standard interfaces to control production and logistics at individual factories, adding the equipment and machine connectivity and customizable processes found in Industry ERP, but without its own finance and controlling module, since that stays with the Group ERP. It was named Factory Software of the Year 2018.

Organizations searching for a corporate planning and management solution, companies looking to optimize execution and production cycles, or firms intending to streamline process management will all find functionality to suit their requirements.

Reducing capital commitment and stock levels via improved inventory management is one of the software's key product uses.

The key feature of CSB-System is its level of alignment with the food and pharmaceutical industries. For example, the bakery implementation has a procurement module designed specifically for the bakery industry and a supply chain management module tailored to accommodate grain and flour producers, bakeries and bread retailers. This level of specialization is consistent across the suite of applications, whether it is in fish, delicatessen, confectionery and more.

## MOBILE ERP COUNTERPART

CSB-System also offers M-ERP® software, which provides mobile access to ERP systems. Features of this software include: no additional software on end devices, configurable masks, customizable applications and evaluations, automatic updates and online connection at any location worldwide.

CSB ERP solutions can be deployed on-premise or hosted in a dedicated cloud. The suite consists of a broad range of mobile applications, meaning the software can be accessed anytime, anywhere and on a variety of devices, including iOS and Android.
