ERPFOCUS

DBA MANUFACTURING NEXT-GENERATION

EXTENDED PROFILE

DBA MANUFACTURING
SOFTWARE FOR SMALL BUSINESS

OVERVIEW

DBA Manufacturing Next-Generation is a self-implementable ERP solution for manufacturing firms with up to 50 employees.

The package is designed specifically for small organizations and is quick to install and simple to use. In order to increase manufacturing efficiency, the software incorporates traditional ERP workflow processes but without a complex array of settings and parameters.

One of the software's key features is its simplified MRP module, which uses just six settings to drive job and purchase order schedules. The Rapid Item Creation tool allows users to add additional bills of material in just a few simple steps. An inventory value report enables users to quickly see their current and historical inventory valuations.

DBA Manufacturing Next-Generation's entry-level price point covers modules including inventory (tracking, unit costs, pricing); bill of materials (component notes, cost roll-up, multiple revisions); sales orders (mass price update, third party billing, order acknowledgment); material requirements planning (job days calculator, dispatch report, overlap scheduling); jobs (labor tracking, job tracking, subcontract services); purchasing (supplier/manufacturer cross-references, PO forms, serial number designation); and general ledger (accounts receivable/payable, banking, financial transfer).

DBA's ERP solutions are designed for self-implementation – including a "step-by-step series of sequential tasks and video training courses" – and their sales model is based on self-help evaluation tools, single package pricing, and a 180-day return policy.
