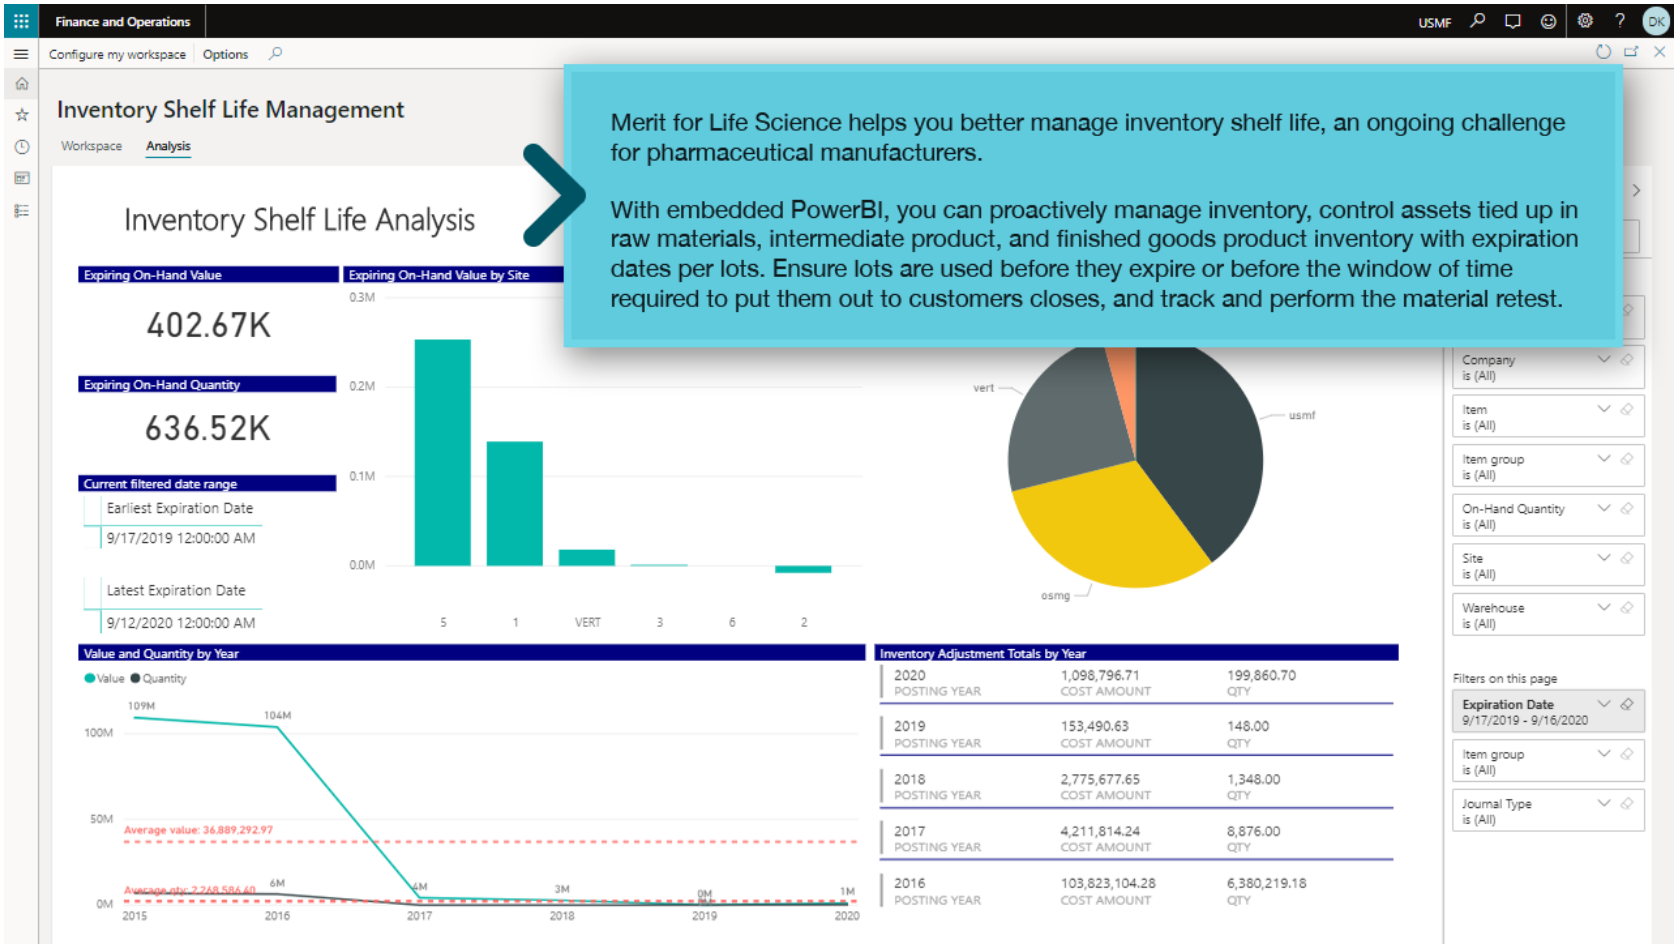
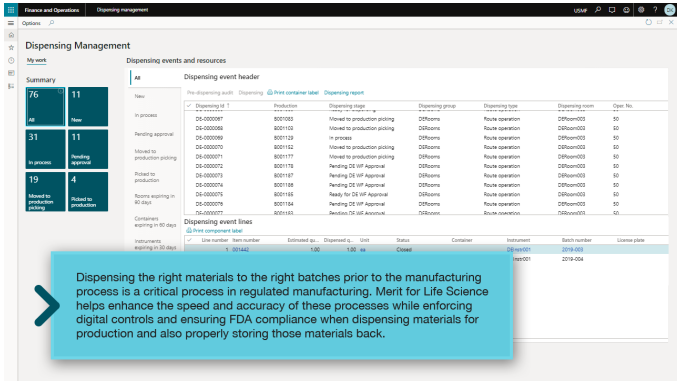
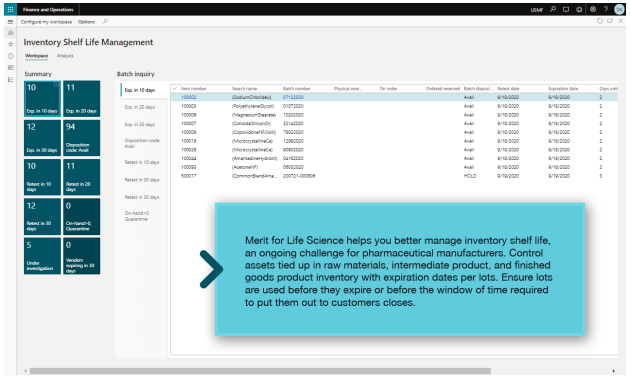
FURTHER INFORMATION

SOFTWARE SCREENSHOTS

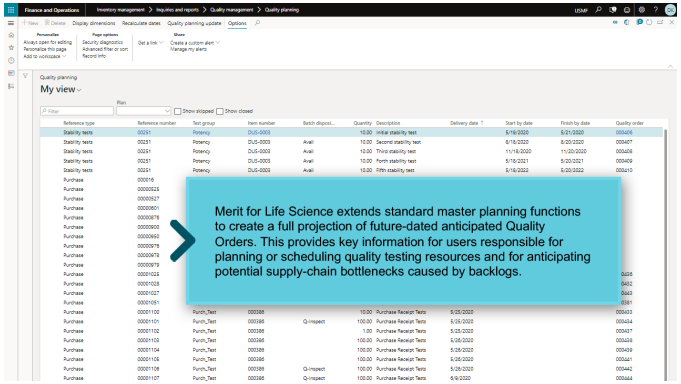




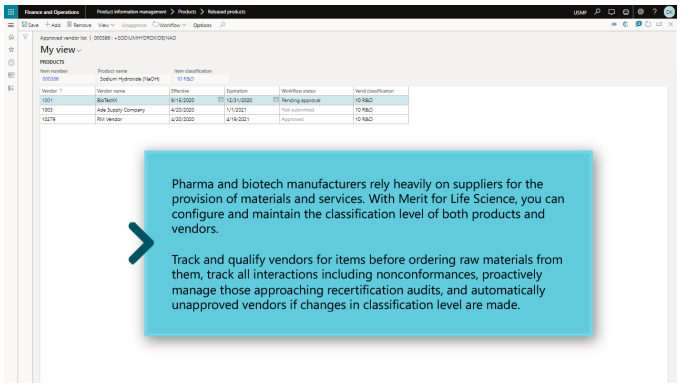
Dispensing Management
Dispensing the right materials to the right batches prior to the manufacturing process is a critical process in regulated manufacturing. Merit for Life Science helps enhance the speed and accuracy of these processes while enforcing digital controls and ensuring FDA compliance when dispensing materials for production and also properly storing those materials back.



Inventory Shelf Life Management
Merit for Life Science helps you better manage inventory shelf life, an ongoing challenge for pharmaceutical manufacturers. Control assets tied up in raw materials, intermediate product, and finished goods product inventory with expiration dates per lots. Ensure lots are used before they expire or before the window of time required to put them out to customers closes.



My view
Merit for Life Science extends standard master planning functions to create a full projection of future-dated anticipated Quality Orders. This provides key information for users responsible for planning or scheduling quality testing resources and for anticipating potential supply-chain bottlenecks caused by backlogs.



My view
Pharma and biotech manufacturers rely heavily on suppliers for the provision of materials and services. With Merit for Life Science, you can configure and maintain the classification level of both products and vendors.
Track and qualify vendors for items before ordering raw materials from them, track all interactions including nonconformances, proactively manage those approaching recertification audits, and automatically unapproved vendors if changes in classification level are made.
