

10X ERP

EXTENDED PROFILE

OVERVIEW

10X ERP is a cloud-based ERP for primarily mid-sized businesses that have outgrown entry-level accounting software but do not want the cost, complexity, or long deployment cycles associated with large, highly configurable ERP suites.

CORE FEATURES

10X ERP is centred on a unified financial and operational data model. Key areas include:

- **Financial management:** Includes general ledger, accounts payable, accounts receivable, budgeting, and financial reporting. Financial data is structured to support consistent reporting across entities and periods, which may appeal to finance teams prioritizing accuracy and audit readiness.
- **Order and revenue processes:** Supports order-to-cash workflows, including order management, invoicing, and revenue tracking. Workflows are designed to follow predefined process paths rather than extensive user-level customization.
- **Procurement and expense control:** Purchase-to-pay processes cover purchasing, approvals, and supplier transactions. Expense tracking is integrated into the broader financial module.
- **Data consistency and controls:** The ERP's controlled data entry and standardized process reduce variability across departments, though it may require users to adapt to the system's structure rather than tailoring the system to existing habits.
