

SCIPIO ERP

EXTENDED PROFILE

OVERVIEW

Scipio ERP is an open-source system that combines business applications with a webshop in one package.

Scipio ERP comes with a templating toolkit that gives support with layout and helps the process of getting started. These templates are customizable, and all themes within the platform can be extended and adapted to specific company needs. It comes with an extensive list of applications, including core functions like financials and order management and extras like CRM, and can run in a clustered and multi-tenant environment, which makes the platform highly scalable.

Scipio ERP comes with a Magnolia connector for easy connection with other business applications - all the data available in your ERP system is also available on your Magnolia pages. It also integrates with Apache Ofbiz, which offers platform-independent technologies, security, performance, and scalability.

The platform is free in its basic form with support offered by the Scipio ERP Community, though there is an additional annual fee for professional support and warranty options. Implementation takes around nine months, and Ilscipio offers full implementation support for the duration. This includes technical and general implementation consultancy, user training, and maintenance.
