ERPFOCUS

INECTA FOOD ERP EXTENDED PROFILE

inecta

OVERVIEW

Inecta Food ERP is a purpose-built ERP for food processors, distributors, and manufacturers built on Microsoft Dynamics 365 Business Central.

The system integrates financials, supply chain, recipe and production control, traceability, warehouse operations, and logistics into a single, cloud-native solution.

Serving as an industry layer on top of Business Central, the ERP uses Microsoft's base platform for core financials, security, and user management. Inecta also holds Microsoft Gold partner status and uses a direct cloud delivery model.

CORE CAPABILITIES

- Recipe and formulation management: Manage bill of materials, yields, and cost rollups for manufactured food products.
- Traceability and quality control: Bidirectional lot traceability, QC checkpoints, and documentation to support food safety and compliance.
- Inventory and warehouse management: Catch weight and batch-aware inventory, lot expiry tracking, and warehouse workflows.
- Transportation and distribution: Route and delivery planning, direct store delivery capabilities, and third-party logistics support.
- EDI and integrations: Integrated EDI options and connectors so businesses can exchange orders and invoices with customers and suppliers.
- Reporting and data tools: BI, ETL, and reporting options that extract and transform data for custom analytics.

Because Inecta uses D365 BC as its core, licensing and certain functionality follow Microsoft’s user and module model. Organizations should include Business Central licensing in total cost calculations.

It suits mid-market and enterprise food businesses best. Smaller operations may find the scope larger than needed.
